Abstract (en)
[origin: EP1469439A1] The method involves activating keys of a control interface of a command transmitter (1), to transmit a control signal to an electrical equipment e.g. rolling shutter (12), of a building, in one mode. The control interface is locked using a locking unit in another mode. Information concerning the controlled electrical equipment and/or the transmitter is displayed on a user information interface of the transmitter. An independent claim is also included for a command transmitter having a control interface and a user information interface.
