Abstract (en)

[origin: EP1469568A2] The plug-in contact element has a housing part (10) having at least 2 planar wall regions (20,20',20") at the plug-in housing end which are angled towards one another and coupled together via curved coupling regions (22,22'22"). The latter are provided with notches (36,36',36",36'') at the plug-in housing end, each having a peripheral edge (38,38',38",38'') at an angle or a tangent to the orthogonal to the plug-in direction (D) at the boundary between the curved region and the planar wall region. An independent claim for a manufacturing method for a housing part of a plug-in contact element is also included.
