Abstract (en)
[origin: WO03063636A2] The sunshade (1) comprises an automatic closing mechanism (15) should it fall over, said mechanism (15) comprising an elongate sliding element (16, 36) wherein one part thereof protrudes above the corolla (5), said part being able to meet the ground should the parasol (1) fall over and being able to result in the sliding of said elongate element (16, 36), whereupon the releasable means (8, 10 ; 30, 31) for locking the sunshade in an open position can be released. According to the invention, said mechanism (15) comprises an elastic recall means (20) acting upon said elongate element (16, 36) in such a way that said elongate element (16, 36) is maintained in the sliding position wherein the elongate element (16, 36) does not act upon the releasable locking means (8, 10 ; 30, 31).
