Abstract (en)
[origin: WO03064250A1] Disclosed is a holding device for fixing a protecting cage to the shaft of the outboard engine of a boat, comprising a ring element (5) which is placed around the shaft (1) of the outboard engine and is detachably fixed thereto by at least one closure. The cross section of said ring element has the shape of a U profile, the opening of which faces the center of the ring element (5). The inventive holding device also comprises at least one projecting part which is radially directed towards the outside at the upper end of the protecting cage (13) and is inserted into the opening of the U profile of the ring element (5), whereby the protecting cage can be mounted and dismounted in an easy and fast manner.
