Abstract (en)

[origin: WO03060402A1] Disclosed is a refrigerator comprising a heat-insulating housing (2), one evaporator (6), two spaces (3, 4) which are surrounded by the housing and are cooled by said one evaporator (6) to different set-point temperatures, a source (10-12) supplying the evaporator (6) with fluid cooling means, a temperature sensor (17), and a control unit (13) controlling the operation of the source (10-12) in relation to a temperature detected by said first temperature sensor (17). The temperature sensor is positioned in such a way that the air temperature in the warmer (3) of the two spaces (3, 4) is detected.
