Abstract (en)  
[origin: WO03015372A1] The invention relates to a communication network, a corresponding communication method and a communication module. The communication network comprises a first server group, at least one second server group and a first communication path between the first and second server group. The aim of the invention is to provide a communication network, a communication method and a communication module for use in a communication network, which, in particular, significantly reduce the possibilities for misuse of the data of a user of a communication network. The above is achieved, whereby the first communication path comprises a connection module for establishing and maintaining a first communication connection and the communication module is embodied such as to permit the use of a service provided in the first server group by the second server group, but not the use of a service provided in the second server group by the first server group.
