Abstract (en)  
An elastically deformable valve with automatic closure applicable to containers of fluids which are dispensed through said valve when the container is manually squeezed to pressurize the fluid contained therein, the valve being formed of a single piece of moulded elastic material and presenting cuts (5) defining flexible appendices (6) which flex outwards from the container during fluid dispensing and reclose against themselves to close the valve when at rest. The cuts (5) are provided in a dome (3) defined by re-entrant surfaces when the valve is in its rest state. <IMAGE>
