Abstract (en)
A third lobe is arranged in an accommodating space confined by a cover (40). The third lobe is turned away from the first and second lobes of the respective front sidewalls of two mounting seats (10,20). The turning away of the third lobe allows the sliding of a slide seat (30) between engaging and disengaging positions when the cover is moved to an open position after removal of a shackle (52) from the lobes.
