Abstract (en)
[origin: EP1471260A2] The recirculating pump (1) and especially for a heating system, with a valve (13) which alters the cross section of the inflow opening according to temperature, has a control unit (14) within the pump housing (2) to set the valve. The control unit and the valve are at opposite sides of the pump motor (3,4). The valve setting unit (15) is at the valve setting rod (17) which is coaxially through the motor shaft (7). The control unit has a fluid-filled expansion vessel (19).
