Abstract (en)
[origin: WO03065847A1] A furniture system comprising at least one dimensionally stable, plate-shaped element (1) with one or more duct-shaped sections (2) which each have a through-groove (7). The system further comprises a number of rigid and elongate connecting elements (8) with a threaded fastening element (9) at each of their ends. The connecting elements (8) are releasably secured in said plate-shaped element (1) by means of associated separate, threaded fastening means (11), which are movably but not turnably arranged in the duct-shaped sections. Since the fastening element (9) at one end of the connecting element (8) is right-hand threaded and the fastening element (9) at the opposite end is left-hand threaded, the connecting element (8) can be mounted at the same time on a pair of opposite plate-shaped elements (1).
