Abstract (en)
[origin: WO03061548A1] The invention relates to a remote-control vibrator comprising a receiving interface, a microcontroller connected to the latter and a resonator device that is controlled by the microcontroller. The receiving interface is a Bluetooth interface, which is designed for bi-directional, wireless signal transmission between the vibrator and an external Bluetooth device. The vibrator can be remote-controlled and remote-programmed via its Bluetooth interface. The invention also relates to a device for remotely controlling a vibrator, which comprises a vibrator equipped with a Bluetooth interface and a second Bluetooth device, said second Bluetooth device being provided for generating remote-control signals and/or remote-programming signals for the vibrator.
