Abstract (en)

[origin: WO03066439A1] The invention relates to a method for packaging piece- items in a disposable packaging, and to a disposable packaging. A labelled support card comprising at least one gas-impermeable layer is provided with at least one piece-item. The projected bearing surface of the piece-item and a joint surface of the labelled support card surrounding said bearing surface are smaller than the largest gas-impermeable layer. Openings are made around said joint surface along a closed three-dimensional curve, piercing at least all the gas-impermeable layers. The fitted support card is covered by a gas-impermeable extensible film. The space defined by the extensible film and the support card is evacuated by means of the openings. At least one joint surface of the extensible film enters into adhesive contact with at least one joint surface of the labelled support card, forming a sealed joint.
