Abstract (en)
[origin: WO03066679A1] An isolated RBP with at least one of the following characteristics: a a molecular weight of approximately 65-70 kDa and more preferably 66-69kDa b a pl of greater than 10 or less than 3 c a dissociation constant of approximately 1.5×10^{-6} when bound to the rhamnose moiety of solamargine d adapted to bind to a rhamnose affinity column prepared according to example 1 and under the conditions set out therein e adapted to be eluted from the column in example 1 with a 100mM rhamnose solution f insoluble in aqueous solution and g soluble in highly denaturing buffers containing greater than approximately 2% surfactant.
