Abstract (en)  
[origin: WO03066954A1] The invention relates to an iron. The inventive iron consists of a liquid container (6) comprising an inlet (7) which is fitted with means of receiving and guiding the liquid through said opening towards the container. Preferably, the aforementioned means comprise a part (9) in the form of a slide valve or chute. Moreover, said means, which pass through the opening, can move in translation between a first open position, whereby the liquid can be introduced, and a second closed position, whereby the means are retracted into the iron in order to close the opening (7).
