Abstract (en)
[origin: WO03066983A1] The invention concerns a flexibly assembled three-dimensional dynamic structure, consisting of an assembly of alternating rigid (1) and flexible (2) elongated elements associated with means for controlling deformation of said assembly such as pivots (5), looping flexible links and any other means enabling to stabilize the assembly, such as spacers or links connecting two or several rigid elements (1), the flexible elements (2) being designed to link two or several rigid elements. Said device is of interest in the industrial and commercial field of manufacture and distribution of articles designed for producing decorative or functional objects as well as for providing the framework or skeleton of certain elements.
