Abstract (en)  
Sections, preferably of metallic type, shaped in order to produce, when assembled with each other and with panels of various kinds, multiple fittings, wherein said sections (1,2,3) are based on a common basic shape (2) having a fundamental hollow rectangular cross section consisting of sides (11-12,21-22,31-32) and therefore having a minimum of two dimensions of the rectangular base the same with each other and taken together have a limited number of different forms in such a way that with various lengths of these, of suitable dimensions, that can be made from the said lengths (11s,12s,13s), variously connected together, it is possible to develop a range of versions (4,6,7,8,9) for making up frame structures of a wide variety of shapes and dimensions, such as frame structures forming fittings of various kinds suitable for mounting on the wall or standing on the floor.
