Abstract (en)  
[origin: EP1473242A1] Incorporating a pourer (1, 100) that has a central closed sector (2, 200) that incorporates a horizontal projection (3), like a ring in which there are a number of openings (5) for the passing of the liquid stored in the carafe (35), a body (6, 600) that has an enwrapping flap (8) that joins externally to a vertical flap (16) of the pourer (1, 100); and having a central cylindrical area that forms a pouring tube (7, 700), and a cap (11, 110) that is joined onto the pouring tube (7, 700). The base of the central sector (2, 200) of the pourer (1) incorporates a lower extension from which a number of inclined fins (30) oriented radially and outwards, project; to form contact surfaces for the liquid prior to its outflow through the openings (5), so that the liquid passes out through these latter in laminar state. <IMAGE>
