Abstract (en)
[origin: EP1473424A1] A locking system (16, 18) for a door or window which has an edge (12) facing a frame along a locking plane (14). The locking system comprises at least two blocking pins (42, 44, 46), which are mobile in directions that are inclined with respect to one another between a retracted position of opening and an extracted position of locking. Each blocking pin (42, 44, 46) has a blocking portion (42a, 44a, 46a) and a guide portion (42b, 44b, 46b), and the guide portions (42b, 44b, 46b) are at least partially overlapping one another in a direction orthogonal to the plane of the door or window (10). <IMAGE>
