Abstract (en)

[origin: WO03063992A1] The invention relates to a light signal device (10) for a model track, particularly a model train track, comprising a pedestal (12) provided with electrical connecting elements and a signal head (16) provided with electrical luminous elements (22) which are connected to a signal circuit (27) and a decoder decoding digital electrical control signals. In order to configure the inventive light signal device (10) such that a light signal can be copied as true to the original as possible, the signal circuit (27) and the decoder (26) are integrated into the signal head (16).
