Abstract (en)
  [origin: WO03062568A1] A removable core lock and key device comprises a cylinder housing 10 and a core 20, which is accommodated in the
  cylinder housing. An adapter 30 is operatively connected to a bolt 32. The core and the adapter are provided with means of connection 20d, 30d,
  such as a bayonet joint, so as to selectively prevent withdrawal of the core from the housing. Key actuated engagement elements 28, 30c are
  arranged to selectively allow mutual rotation of the adapter and the core so as to disengage the means of connection, thereby allowing withdrawal of
  the core. A simple yet reliable removable core is thereby provided.
  [origin: WO03062568A1] A removable core lock and key device comprises a cylinder housing (10) and a core (20), which is accommodated in the
  cylinder housing. An adapter (30) is operatively connected to a bolt (32). The core and the adapter are provided with means of connection (20d,
  30d), such as a bayonet joint, so as to selectively prevent withdrawal of the core from the housing. Key actuated engagement elements (28, 30c) are
  arranged to selectively allow mutual rotation of the adapter and the core so as to disengage the means of connection, thereby allowing withdrawal of
  the core. A simple yet reliable removable core is thereby provided.
