Abstract (en)

[origin: WO03069637A1] The invention relates to a magnetic screening for frequency fields between 50 Hz and 3000 Hz, made from a soft magnetic alloy of the following composition in wt. %: 30 % </= Ni </= 40 %, 0 % </= Cu + Co </= 4 %, 5 % </= Cr + Mo </= 17 %, 5 % </= Cr, 0 % </= Nb </= 2 %, Mn </= 0.35 %, Si </= 0.2 %, C </= 0.050 %, O </= 0.0160 %, S </= 0.0020 %, B </= 0.0010 %, optionally at least one element selected from magnesium and calcium in amounts such that the sum thereof remains below 0.1 %, the rest being iron and production impurities. The chemical composition furthermore satisfies the following relationships: Cr + Mo </= 0.8 x Ni + 0.9 x (Co + Cu) 18.4; Cr + Mo </= 4 x Ni + 3 x (Co + Cu) - 124; 4 x (Cr + Mo) >/= 125 - 3 x Ni. The invention further relates to use of said alloy for the production of low-frequency magnetic screening.
