Abstract (en)
[origin: WO0210011A1] The invention concerns a structural subassembly for producing an aquatic gliding board. Said subassembly is characterised in that it comprises a hollow inner shell (7), covered with a casing (8') made of foam capable of being machined. The invention also concerns a method for making such a subassembly and a board produced by coating said subassembly with a web (9) of resin-coated fibres.
