Abstract (en)

[origin: WO03070481A1] The invention relates to a method and a device for creating a printed image on a carrier material (40). According to said method, the surface of a pressure bearer (10) is coated with an ink-repellent or ink-receptive layer (54). Ink-receptive areas and ink-repellent areas are created in a structuring process in accordance with the structure of the image to be printed and ink is applied to the surface, said ink adhering to the ink-receptive areas and not being accepted by the ink-repellent areas. Prior to the application of the ink-repellent or ink-receptive layer (54), the surface of the pressure bearer (10) is coated with a humidity promoter (52) with a molecular layer thickness.
