Abstract (en)

[origin: WO03071079A1] The invention relates to a device for guiding light consisting of at least one partially translucent planar material. Said device comprises a planar upper side, which is provided with optically active surface structures for guiding light and/or diffusing light. In addition, an optically switchable coating is provided at least in partial areas of the surface structures or the inventive device comprises at least two indirectly or directly opposite surface upper sides, of which one has optically active surface structures for guiding light and/or diffusing light, and the other provides an optically switchable coating that covers at least portions of the surface upper side.
