Abstract (en)
[origin: WO03071323A2] To produce an optical interconnect, either between two optical fibers, or between an optical fiber and an optoelectronic conversion circuit, a module comprising a body (2) wherein are overmoulded optical fiber sections (3) is provided. The overmoulding enables to simplify industrial production and provide the optical fiber sections with shapes, in particular end flares (16, 17) and/or lenses (18, 19) enabling useful refocusing of the light rays transported by said optical fibers.
