Abstract (en)

A method and machine for machining door and window frame components (2), whereby each component (2), which has two parallel first lateral faces (3), two second lateral faces (4), and two third lateral faces (5), is moved parallel to the relative first faces (3) inside a relative same pocket (40) at all times, so as to at least tenon a relative second face (4) and profile a relative third face (5), without ever releasing the component (2) from the pocket (40). <IMAGE>
