Abstract (en)

[origin: EP1477730A2] A laser unit (1) for emitting a light beam suitable to provide light effects, which comprises a laser generator (9), a mirror (11) arranged along a direction in which the beam is emitted by the generator (9), and a station (13) for the controlled deflection of the beam, all three components being rigidly mounted on a movable motorized base that allows to orientate the beam emitted by the generator (9); the station (13) comprises two elements for reflecting the light beam, which can move with respect to the base and can rotate about respective rotation axes.
