Abstract (en)
An electric wire, which can be easily distinguished from each other and can prevent the deterioration in the quality of the wiring harness to be assembled, and an apparatus for coloring an electric wire are provided. The wire 1 includes a core wire 2 and a coating 3. The coating 3 coats the core wire 2. An outer surface 3a of the coating 3 is provided with a first distinguishable part 4 and marks 5. The first distinguishable part 4 is formed on the whole circumference of the outer surface 3a of the coating 3, which is located near the central part in the longitudinal direction of the wire 1. The outer surface 3a of the first distinguishable part 4 is colored with a first color G, which is different from a color P of non-colored synthetic resin constituting the coating 3. The marks 5 are formed on a non-colored section 6 provided at both ends 1b of the wire 1. A non-colored coating 3 is bared in the non-colored section 6. The mark 5 is formed by coloring a part of the non-colored section 6 with a second color H. <IMAGE>
