Abstract (en)  
[origin: WO03074406A1] An improved measuring device for measuring the load of an elevator including a car suspended by a tension member within a hoistway, a termination (36) at one end of the tension member (28), a mounting plate (42) for attaching the termination relative the hoistway, and a hitch (38) for attaching the termination to the mounting plate further including load cell (56) positioned between the hitch and the mounting plate wherein the load cell generates a signal proportional to the load of the car.
