Abstract (en)

[origin: WO03064778A1] The invention concerns a device for extracting air from premises and for evacuating foul air contained in a sanitary appliance bowl (1), said device comprising: extracting means (13) for at least 15m³/h extraction, and a non-return valve (6), wherein at least the extraction means (13) is associated with an element (11) ensuring that the ration of air volume extracted by the distribution channel (2bis)/extracted air not passing through the distribution channel (2bis) ranges between 0.1 and 5.
