Abstract (en)
[origin: WO03067078A1] The invention concerns an electronic module for internal combustion ignition coil, in particular of a motor vehicle. It comprises a case (21), at least two electronic components (25, 26) arranged in said case, means (29) for providing electrical connection between said at least two electronic components so as to constitute an electric circuit, a connection terminal (23) designed to connect said module to a high voltage output of an electrical transformer of the ignition coil, a connection terminal (24) designed to connect said module to the input of a starting plug, and means (27, 28) for electrically connecting said electronic circuit to said connection terminals.
