Abstract (en)

A portable fire-extinguisher comprises a metal casing (3) with an internal chamber (4) for housing a charge (5) of a solid substance which can be transformed, at a predetermined temperature, into an aerosol with flame-extinguishing properties. A delivery opening (7) puts the chamber (4) into communication with the exterior. An explosive starting capsule (10), associated with a striker mechanism (13), is provided for triggering the reaction of the extinguishing charge (5). <IMAGE>
