Abstract (en)
[origin: EP1479417A1] The fixation has a layer (30) of elastomeric material interposed between a base (2) and a rigid plate (10) that forms a gaz pedal. The layer has openings (31,32) across which the plate is rigidly fixed on the base. Security screws (20,21) and swivels (22,23) longitudinally displace a contact zone between the plate and base across the openings for longitudinally positioning the plate with respect to the base. The rigid plate has an upper surface (11) that is inclined for receiving a support of a front and back zone of a shoe.
