Abstract (en)

[origin: EP1479804A2] Method for producing a warp sample in which at least a thread is used to form a winding group with a predefined number of windings around the circumference of a warp drum and on a transport surface arrangement on the warp drum. The thread is wound for at least one winding in the direction of a first end of the warp drum out of the winding group and for at least a further winding in the direction of the second end of the warp drum out of the winding group. An independent claim is made for a sample warping creel machine with a warp drum.
