Abstract (en)

A swimming pool covering assembly (1) is described, comprising: a covering tarpaulin (2), supported by a system of at least two mutually substantially parallel support beams (3, 13, 43) which are intended to have their ends resting on a swimming pool edge; and at least one tightening belt (14) attached or attachable to an end beam (13). <??>The tightening belt (14) serves for fastening a free end of the cover to a swimming pool edge, and for accomplishing a tension in the covering tarpaulin. <??>The tightening belt is fastened to a fastening point (16); at that moment there is no tension in the covering tarpaulin yet. Then, with the help of tightening means (50), the end beam (13) is rotated around its longitudinal axis in order to tighten the tightening belt (14). <??>The position of the end beam (13) in the tightened state is locked by locking means (40). <IMAGE>
