Abstract (en)

A method of manufacturing of multi-lever lock is characterized by this, that all particular components of lock are prepared and piled pack of identical levers (6) is bended on a key until front parts (6e) reach a position proper to location of socket (3b) of bolt. Multi-lever lock, inside of body (1) under cover (2) contains a pack of levers (6) fixed on common fixing pin (1c). Lock has moving out bolt (3) fixed permanently to base plate (3a) located under levers (6) pack. Inside of lock, in axis of shaft (7a) of key (7) are executing elements in mean of pressure (4) and turning plate (5). Lever (6) has front part (6e) connected by bending zone (6d) with central part. In this central part each lever (6) has a fixing orifice (6b) fixed on common fixing pin (1c) fastened to lock body (1) bottom. <IMAGE>
