Abstract (en)
[origin: US2005051673A1] The invention concerns a cable suspension arrangement for hanging luminaires comprising a holder for a cable which is vertical in the position of installation for suspending a luminaire at a cable holder point and a fixing region for fixing the luminaire to the suspension arrangement, wherein the fixing region has a center, wherein there are provided means 13, 71 for displacement of the cable holder point 7 laterally with respect to the longitudinal direction in which the cable extends, relative to the center 14 of the fixing region for the luminaire, or means 13, 71 for displacement of the center of gravity 3a of the luminaire, laterally with respect to the longitudinal extent of an associated luminaire, relative to the cable holder point 7 of the luminaire housing. The invention is distinguished in that the lateral displacement means includes an eccentric element 13, the rotation of which causes lateral displacement of the cable holder point 7 and the center 14 of the light fixing region relative to each other or of the cable holder point and the center of gravity 3a of an associated luminaire housing relative to each other.
