Abstract (en)
[origin: EP1480292A2] The connector assembly comprises a first connector (A) having a plurality of first boards (26) which have conductor patterns formed on the surfaces thereof, a second connector (B) having a plurality of second boards which have conductor patterns formed on the surfaces thereof, and a relay connector (C) which is attached to the first connector (A) or second connector (B). In the relay connector (C), a plurality of female type contacts (50) are press-fitted. The contacts (50) have first female type contact parts that contact the conductor patterns of the first boards (26) and second female type contact parts that contact the conductor patterns of the second boards 64 are press-fitted. This arrangement allows the easy replacement of the easily damaged female type contacts (50). The assembly can be used in data transfer systems such as communications devices that transmit data signals at a high speed.
