Abstract (en)
[origin: US2003161704A1] A booklet maker, including a pivotable collecting device including two supporting sides formed as a saddle shape, and a rotatable transferring device including a displaceable clamping component, where the transferring device delivers a folded sheet material to the collecting device along a non-linear path, and where the collecting device pivots to receive the folded sheet material from the transferring device such that different portions of the folded sheet material are supported by different sides of the two supporting sides of the collecting device.
