Abstract (en)

[origin: WO03070656A1] The invention relates to a fibrous non-woven material, a non-woven material body and a non-woven composite body, a method for producing a non-woven material, and the use of the same. Fibrous bamboo particles, bamboo fibres or bamboo fibre bundles are combined to form a non-woven material, preferably using auxiliary composite elements, such as natural fibres. Said non-woven material is produced by mechanically opening and crushing bamboo shoots, creating a mixture comprising an adhesive auxiliary material, and applying said mixture to a non-woven forming surface, and the fibrous non-woven material is fixed in order to form a non-woven material body.
