Abstract (en)
[origin: WO03074888A1] A tightening roller or a deflection roller (1) for a belt drive consists of a roller (2), which is rotationally mounted, via an antifriction bearing (3), on supporting element (4) with the aid of a fastening screw (4.2). The roller (2) is sealed on both sides, whereby that invention provides that a second sealing element, which is joined in a fixed manner to the inner ring (2.4) of the roller, is placed between the supporting element (4) and the roller (2).
