Abstract (en)

[origin: WO03075248A1] The invention relates to an object (1) with a folded card (20) glued thereto, whereby the separation force value of the surfaces (11) of the object in the region in which the folded card (20) is glued on and the adhesive power of the adhesive (30) used for gluing are selected relative to each other such that the folded card (20) together with the glue (30) may be detached from the object with no damage being caused. After removal, a card (20) can be produced from the folded card (20) by folding and sticking together of the parts (21, 22), coated with glue (30), which is, at least relative to said parts (21, 22), externally non-adhesive on both sides. According to the invention, the separation force value for the surfaces (11) of the object (1) in the named region in which the folded card (20) is glued is selected to be similar to the separation force value for the surfaces of the object in another region (15) not covered by the folded card (20) and the glue (30) is selected relative to the surface separation force value such as to be able to be detached without causing damage. The folded card (20) can thus be directly glued to the object (1) without interposing further layers. The objects are particularly forms (1) made from paper
