Abstract (en)
A phial (1) comprises a pair of fins (6, 7) arranged on opposite sides of the phial. The fins permit a mutual connection and the following detachment and/or re-attachment of more phials arranged consecutively. A first fin has two parts with staggered tongue (11) that overlap the fin of the consecutive phial such that the teeth (8) are inserted in the holes (12) of the consecutive fin. A phial comprises a pair of fins arranged on opposite sides of the phial. The fins permit a mutual connection and the following detachment and/or re-attachment of more phials arranged consecutively. One of the fins has teeth and is subdivided in two parts by tongue, which is arranged in a staggered manner, while the other fin had corresponding holes. The two parts of the first fin and their staggered tongue overlap the fin of the consecutive phial such that the teeth are inserted in the holes of the consecutive fin.
