Abstract (en)  
[origin: EP1482460A2] The machine has a display device (32) for displaying extracting cards. A main control unit includes a central processing unit (CPU) finding which winning combination is formed with symbols of cards, where determination is made based on winning combination determination table stored in RAM. The CPU controls time before the cards are displayed based on determination of the combination of the cards matching preset combinations. Independent claims are also included for the following: (a) a server is connected via a communication line to terminal devices, each of which comprises display units for displaying cards of a card game (b) a program making a computer to execute a game.
