Abstract (en)  
[origin: WO03074401A1] A cutting device, for the transverse cutting of at least one first material web (03), comprises a cutting cylinder (11) and a first counter cylinder (12), which rotate together and define a first gap (01) through which a first transport path for the first web (03) runs. The cutting cylinder (11) has at least one cutting blade (14) for the cutting off of a product from the first web (03) on passing the cutting blade (14) through the first gap (01) and a holding device (16) for holding a cut product and transporting the product up through the first gap (01). The counter cylinder (12) comprises a thrust bearing (15) cooperating with the cutting blade.
