Abstract (en)

[origin: WO03069091A1] A process for anchoring ceramic tiles to wall, wherein panels (10) are manufactured, made of several overlaid ceramic tiles (11, 12, 13) exhibiting threaded rods (18) to which rubber blocks (19), or blocks made of a similar material, are subsequently applied. The panels are then positioned and blocked in a final position by constraining the rubber blocks to shaped support brackets (25), previously fixed on the wall to be covered. The anchoring apparatus comprises rubber blocks (19), or blocks made of a similar material, which are shaped so as to be constrainable to the shaped brackets (25) by a simple operation of insertion and rotation by means of special levers.
