Abstract (en)
[origin: WO03076906A1] The invention relates to a method and a device for metering a sample quantity. A desired sample quantity is collected in two steps. In a first step, a randomly defined variable sample quantity is metered and collected while in a second step, a predefined sample quantity is metered and collected. The metering device for a sample collector used for metering a predefined sample quantity comprises a pump (6), a metering container (1), a metering pipe (2), and a cut-off device which is embodied as a transporting device (3), by means of which an additional randomly adjustable sample quantity can be metered.
