Abstract (en)

[origin: US2005146465A1] Disclosed is a remote-control device, particularly a remote-control central lock for motor vehicles, comprising an electrical device ( 3 ) which is preferably mounted in a housing ( 5 ) and an antenna ( 7 ). The inventive remote-control device is further characterized by the following: the antenna ( 7 ) is configured a) as a bendable antenna ( 7 ) that is dimensionally stable in the bent shape, and/or b) as a stiff antenna ( 7 ), and/or c) as an antenna ( 7 ) which is fixed to and maintained above a rigid and/or dimensionally stable base ( 5' ) or housing ( 5 ): the antenna ( 7 ) is in a predefined position relative to the electrical device ( 3 ) and/or the housing ( 5 ) receiving or the base ( 5' ) supporting said electrical device ( 3 ); and the electrical device ( 3 ) and the antenna ( 7 ) are embodied as a as a combined device ( 1 ) in the form of an assembly operated as a single unit.
