Abstract (en)

[origin: EP1484122A2] The method uses a measuring device (6) employing a contactless measuring method, e.g. a laser measuring device, for detecting the velocity of the curved extruded profile within the extrusion press tool behind the exit plane (8) of the extrusion press tool matrix (2), within the mouth (9) of the latter. An independent claim for a device for determining the extruded profile delivery rate within an extrusion press is also included.
