Abstract (en)

[origin: EP1153875A1] The lock consists of a linearly movable locking-bolt (14) for joining and detaching an inner (18) and outer telescopic length of pipes. When extended, the locking bolt is held in a pretensioned position, and is moved by means of a rotary control (7) to which it is joined by a connecting element (10), especially in the form of a curved claw. The detaching appliance consists of a piston-cylinder unit (1,3), especially a cylinder head (2) on the piston-outlet side.
